CDaX Management Performance Review

Executive Business Intelligence Review | 30 October 2026

Overall Assessment

Launch readiness is not yet fully verified from the reviewed sample data.

The reviewed sample shows course catalogue and content records, a small number of student and purchase records, and limited learning progress. It does not establish production release readiness, successful payment collection, operating costs, support SLA performance, live-class delivery performance or platform availability.

1. Verified Sample Baseline

Measure	Observed value	Interpretation
Student accounts	3	Sample accounts; not a market baseline
Courses	7	Catalogue records
Modules	33	Content structure records
Videos	30	Content records
Purchase records	5	Payment success and revenue not verified
Favorites	4	Interest signal only
Video progress	4 rows; 3 completed flags	Not course completion
User streaks	1 row	Insufficient for engagement trend

2. Product Readiness

Seven course records, 33 modules and 30 videos are present. A published flag is not proof of deployment, content approval or QA sign-off.

The reviewed data does not establish end-to-end authentication tests, mobile and desktop validation, low-bandwidth testing, live-class capacity, backup/restore or rollback readiness.

Required action: Prepare a signed launch checklist and provide evidence for each launch-critical dependency.

3. User Operations

The source includes 3 student accounts, 5 purchase rows, 4 favorites, 4 video-progress rows and 1 populated streak row.

Demo attendance, live-class attendance, projects and certificates cannot be measured from the reviewed sample.

Required action: Instrument demo booking and attendance, live-class attendance, project submissions and certificate completion. Do not treat the sample records as a complete student funnel.

4. Commercial Performance

Course price and discount_price fields exist, but their meanings require confirmation.

Purchase rows contain purchase ID, date, course ID and user ID. No payment amount, payment status, gateway reference, refund or fee information was verified.

Therefore, gross collections, payment success, refunds, subscriptions, operating costs, contribution margin and break-even are not calculable from the reviewed records.

Required action: Connect payment gateway and order records with payment amount, status, fees, refunds and course-access information. Obtain an approved operating cost ledger.

5. Operational Efficiency

The following measures are unavailable in the reviewed sample:

- Onboarding completion
- Time to first learning

- Payment-to-access time
- Support first-response time
- Support resolution time
- Live-class attendance
- Platform availability

Required action: Connect event timestamps, support ticket records, payment/access records, attendance rosters and uptime logs.

6. Data Quality

A purchase-before-registration anomaly was identified:

- Purchase row 1 for user 3 is dated **1 January 2026**.
- The same user's registration date is **3 January 2026**.

Check timezone, source clocks, import history and event definitions. Do not silently change the original dates.
The previously reviewed assessment template had no populated assessment master, question bank or student response records.

7. Required Management Actions

Priority 1

1. Approve launch scope, QA checklist, defect closure and release sign-off.
2. Confirm the meaning of course price fields.
3. Connect payment status, amount, refunds and course-access reconciliation.
4. Approve the operating budget.
5. Implement support ticketing, ownership and escalation.
6. Validate registration-to-first-learning event tracking.

Priority 2

1. Capture demo and live-class schedules and attendance.
2. Connect mentor assignments and class capacity.
3. Connect assessment, project and certificate records.
4. Approve KPI owners, reporting frequency and thresholds.

8. KPI Monitoring Approach

Frequency	Suggested review
Daily	Registrations, payment reconciliation, critical incidents and support queue
Weekly	Onboarding, learning activity, attendance and support performance
Monthly	Revenue, refunds, operating costs and commercial performance

Numeric targets and escalation thresholds should be approved by management after a reliable baseline period. Arbitrary targets should not be assigned to unavailable KPIs.

9. Scope and Limitations

This report is based on the previously shared CDaX sample/seed workbook and related analytics documentation. Counts are not live production metrics.
This review does not claim to have executed SQL against a live database. Missing evidence is marked unavailable rather than estimated. Scenario models and proposed frameworks are not treated as actual business results.
